**Notes:**

1. The MECP Schedule 3 limits and screening levels in "Air Contaminants Benchmarks (ACB) List: Standards, guidelines and screening levels for assessing point of impingement concentrations of air contaminants" and concentrations previously reviewed and approved by the MECP during the ECA review were used for the assessment criteria. If there are no related MECP standards for contaminants, a de-minimus evaluation approach was used to assess the significance of these contaminants. Based on Table B-2A in Appendix B of the MECP ESDM Procedure Document, a substance that does not have a MECP POI limit and is not listed in Table B-2B, it can be considered insignificant if its predicted impact is below 0.1 µg/m<sup>3</sup> (for a 24-hour average period).

SL-JSL: Jurisdictional Screening Levels

SL-MD: Ministry-derived (MD) Screening Levels

SL-PA: Previously Accepted (PA) Screening Levels

2. Benchmark 1 (B1) values and Benchmark 2 (B2)

3. AERMOD results are predicted maximum off-property ground level concentrations after removal of anomalies.
