

MITIGATING COVID-19 RISKS

WHAT EVERY BUSINESS NEEDS TO KNOW ABOUT DISINFECTION SERVICES

The COVID-19 situation makes cleaning, sanitization and disinfection of your facility's spaces and surfaces critical to protecting your staff, your customers and your business. While mitigating COVID-19 risks is a complex challenge, when it comes to surface disinfection, there are three things you need to be sure of:

EPA LIST N PRODUCTS

The EPA has designated specific disinfectant products – EPA List N – for use against SARS-CoV-2, the cause of COVID-19.

STRICT LABEL ADHERENCE

The EPA product label defines the only conditions under which the product is **proven** to effectively kill viruses and bacteria.

CONFIRMED CONTACT TIMES

The minimum contact or “wet” time, specified on the product label, indicates how long a disinfectant product needs to sit **wet** on a surface in order to effectively kill viruses and bacteria.

COMMON QUESTIONS

Can I Disinfect Hard & Soft Surfaces with One Product?

Most disinfectant products are labeled for use on hard surfaces only. Sanitization and disinfection of soft surfaces, such as carpet and upholstery, requires specialized products and application methods defined by the EPA.

Can a Space be Returned to Use Immediately After Disinfection?

In some cases yes. However, if the surface is a food contact surface, then additional rinsing and sanitizing will be required before returning to service.

ECOLAB DISINFECTION SERVICES

Ecolab's uniquely designed, short contact time disinfectants have been rigorously tested for specific surfaces

Reliable service performed by highly trained Service Specialists

Deep expertise in antimicrobial technology and regulatory requirements around public health and food safety risks

WE ARE COMMITTED TO A HIGHER STANDARD

Contact your **Pest Elimination Service Specialist** to learn more about this service offering and schedule your appointment today!
